

# Notes & Minutes

Location: DW PC1 cubicle 4

Date: 04 Apr 23

Time: 15:30 – 16:00

Chairperson: Karol Sparczyński

Minute Taker: María Rosuero

## Agenda items

### 1. Opening by Chairperson

*No minutes.*

### 2. Approval of the agenda

TA suggested showing a demo of the application instead of discussing everyone's code progress due to lack of time.

### 3. Showcase demo of the application

Found bug: the Edit Card view of a card doesn't close for all clients when it is deleted.

### 4. Questions

See Q&A.

### 5. Closure

Reminded everyone about the deadlines.

Heuristic Usability Evaluation, Product Pitch, and Final Code Submission on Apr 11 (next Tuesday)

## Questions & Answers

Q: How can we test the front-end?

A: Testing the controllers for the FXML is very difficult, you should test the methods without the FXML part, treating them as a normal class.

Q: Do we need unit tests for controllers at all?

A: Yes, right now you test the DatabaseController through other classes, you should test it directly.

Q: Do we need to redo the heuristic evaluation with the updated version of the app?

A: Yes, but you do not need to ask for feedback from the other team again. For the mockups, you should show both the old version of the scenes and the new ones, you should add all the images at the end of the document and reference them in the text.

Q: Do we need to redo the product pitch with the updated version of the app?

A: Yes, you need to show the new features. It is better to show the app in full screen and show your face.

Q: Should we change the design of the app to be like the Edit Card View to get a better grade?

A: Yes, also you should add CSS to the buttons.

Q: Is the icon to show the card description good?

A: It doesn't look great.

Q: How should we refer to the teamwork principles in the Teamwork Self Reflection?

A: You should add formal references in the References section referring to the document and the slide.

#### TA suggestions.

- Remove the color picker. It shows bad prioritization of the tasks and could lead to an insufficient.
- Implement every user story from the multi-board epic to get more than a sufficient grade.
- Add the @Service annotation to the DatabaseController.
- We will very likely fail the Coverage subsection of the Testing grade since most of the MRs that implement features don't have tests and they are only implemented later.
- Add the word count at the end of the documents.
- You only have 2 classes for the client controller, you should try to divide it.
